

Garden Landscaping - General Information

Comprising of a small professional landscaping team, the New Roots Nursery garden designs are the work of Stavros Saltos.

With expert knowledge especially in the cultivation of olive trees, fruit trees and Mediterranean plants, the gardens are designed to be practical and successful in Cyprus.

Whether a complete garden starting from scratch or individual features in an already existing garden, our ideas and meticulous execution of those ideas are renowned.

Inspiration is drawn from nature and the Cypriot environment. Emphasis is on creating a garden that looks natural and has a distinctively 'aged- look' blending into the Cyprus landscape. Traditional techniques like Cypriot dry stone walls are very popular with our clients as is the traditional Cypriot arch or 'Kamara'.

The basic materials used for developing a landscape are carefully selected rocks and stones that are in keeping with the character of the area.
